Parameter table	
Example of processing packets written in C	10

## **PURPOSE**

This guide covers the connection of Vento Expert (Duo) A30/50/85/100 W V.2 series of air handling units to a "Smart Home" system. Control is provided only by Master devices. Slave devices, mobile devices, and "Smart Home" system components are connected to master devices over Wi-Fi. Slave devices are controlled by means of commands received from master devices.

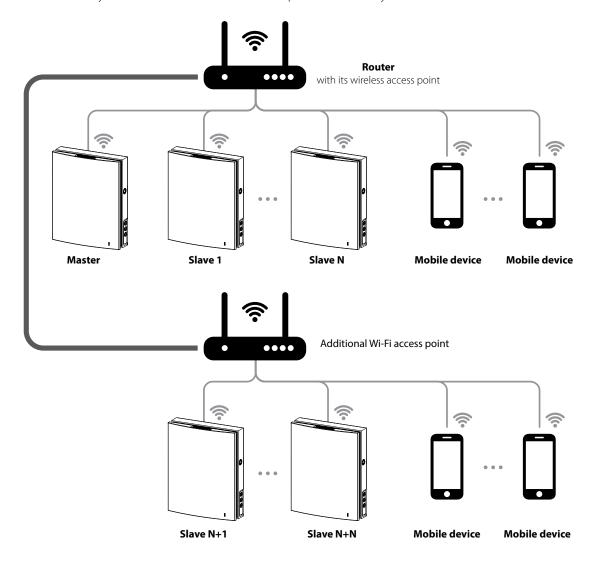

There are two wireless connection patterns available:

1. A master device with a Wi-Fi access point, which can accept up to eight slave connections. If all the available eight connections of the master device are used, a mobile devices or a "Smart Home" system will not be able to connect to the master device.

2. Master devices, slave devices, mobile devices and a "Smart Home" system connect to the Wi-Fi access point of the network router. In this case the maximum number of available Wi-Fi connections is limited by the router functionality. If the number of necessary ventilation units is more than the router can accept, you may use an additional Wi-Fi access point to connect the remaining ventilation units. The router network may include several master devices to provide control by zones.

The connection is set up via the mobile application from the Connection -> Wi-Fi setup menu (see the unit data sheet).

#### **NETWORK PARAMETERS**

Data is exchanged via the UDP protocol (with broadcast support).

Master device IP address:

- 192.168.4.1 if the master device runs without a router (connection pattern 1).
- If the master device is connected via a router (connection pattern 2), the IP address is set up via the mobile application (see unit data sheet) and can be defined as static or dynamic (DHCP).

Master device port: 4000.

Maximum packet size: 256 bytes.

#### **PACKET STRUCTURE**

0xFD 0xFD TYPE SIZE ID ID SIZE PWD PWD FUNC DATA Chksum L Chksum H

**0xFD** : packet beginning character (2 bytes).

**TYPE**: protocol type (1 byte). Value = 0x02.

**SIZE ID**: ID block size (1 byte). Value = 0x10.

: controller ID. This number is printed on the label (16 characters) applied to the control circuit board or the unit casing.

You can also substitute the ID with "DEFAULT\_DEVICEID" code word. The ID can be used:

- To control the master device if it runs without a router (connection pattern 1).
- To search for master devices on the network if a router is used (connection pattern 2). In this case the device will respond to two parameters only: 0x007C and 0x00B9 (see parameter table).

SIZE PWD: PWD block size (1 byte). Possible values: from 0x00 to 0x08.

**PWD**: device password (permissible characters: "0...9", "a...z", and "A...Z"). The default password is "1111".

This password can be changed via the mobile application from the **Connection -> At home -> Settings menu** (see the unit data sheet).

**FUNC**: the function number (1 byte). It defines the action with the data and the **DATA** block structure:

0x01: parameter read.

0x02: parameter write. The controller does not send any response regarding the status of the given parameters.

0x03: parameter write with subsequent controller response regarding the status of the given parameters.

0x04: parameter increment with subsequent controller response regarding the status of the given parameters.

0x05: parameter decrement with subsequent controller response regarding the status of the given parameters.

0x06: controller response to the request (FUNC = 0x01, 0x03, 0x04, 0x05).

**DATA**: the data block. It consists of parameter numbers and their values:

If FUNC = 0x01 or 0x04 or 0x05:

P1 P2 Pn

*If FUNC = 0x02 or 0x03 or 0x06:* 

P1 Value 1 P2 Value 2 Pn Value n

Parameter numbers(see parameter table) consists of two bytes (the high byte is virtual). By default the high byte of each parameter number in each new packet equals 0x00. The high byte can be changed within a single packet using the special 0xFF command (see below).

**P** is the low byte of the parameter number. Possible values: 0x00 – 0xFB. The 0xFC – 0xFF values are special commands:

oxFC: change function (**FUNC**) number. The following byte must be the new function number ranging from 0x01 to 0x05. This command is used to organise several functions with different actions into a single packet.

errameter not supported by the controller. The following byte is the low byte of the non-supported parameter. This command is used in controller response (**FUNC** = 0x06) to a non-supported parameter read or write request.

oxFE : change a size of the Value for one parameter which follows. The following byte must be the new parameter size followed by the low byte of the parameter number, and then – by the Value itself.

**OxFF**: change the high byte for parameter numbers within a single packet. The following byte must be the new high byte.

**Value**: parameter value (the default size of value is 1 byte). Byte ordering from least significant byte to most significant byte.

**Chksum L** : checksum (2 bytes). This is calculated as the total of bytes beginning with the TYPE byte and ending with the final byte of the **DATA** block.

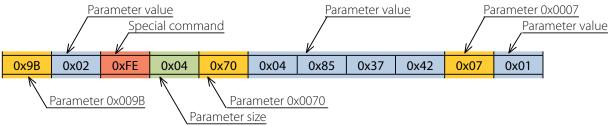

**Chksum L**: checksum low byte.

**Chksum H**: checksum high byte.

#### **EXAMPLES OF USING SPECIAL COMMANDS IN THE DATA BLOCK**

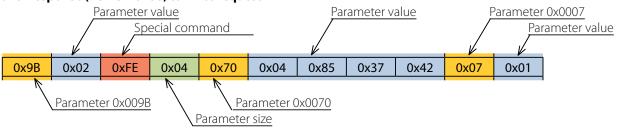

#### Write request (FUNC = 0x03) for parameters number 0x009B, 0x0070, and 0x0007

Write request details:

- Parameter 0x009B to be assigned the value of 0x02.
- Parameter 0x0070 to be assigned the value of 0x42378504. The value size is 4 bytes as indicated by the special command 0xFE + 0x04.
- Parameter 0x0007 to be assigned the value of 0x01.

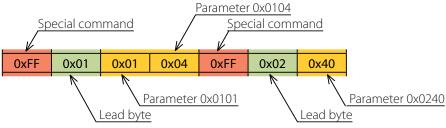

## Controller response (FUNC = 0x06) to write request

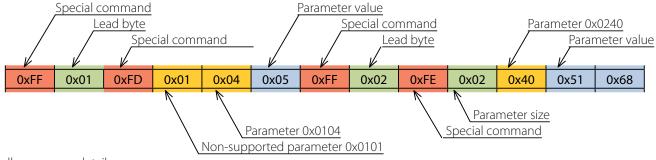

Controller response details:

- Parameter 0x009B equals 0x02.
- Parameter 0x0070 equals 0x42378504. The value size is 4 bytes as indicated by the special command 0xFE + 0x04.
- Parameter 0x0007 equals 0x01.

## Read request (FUNC = 0x01) for parameters number 0x0101, 0x0104, and 0x0240

#### Controller response (FUNC = 0x06) to write request

Controller response details:

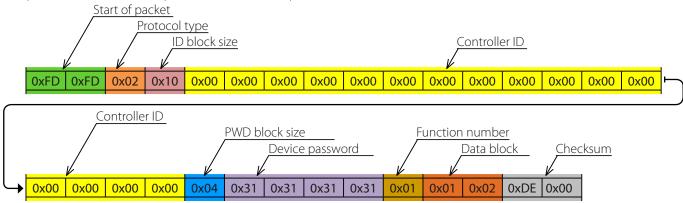

- Parameter 0x0101 is not supported by the controller as indicated by the special command 0xFD.
- Parameter 0x0104 equals 0x05.
- Parameter 0x0240 equals 0x6851. The value size is 2 bytes as indicated by the special command 0xFE + 0x02.

## **COMPLETE PACKET EXAMPLES**

## Sending "Smart Home -> Controller" packet

This packet contains a read request (FUNC = 0x01) for parameters number: 0x0001, 0x0002.

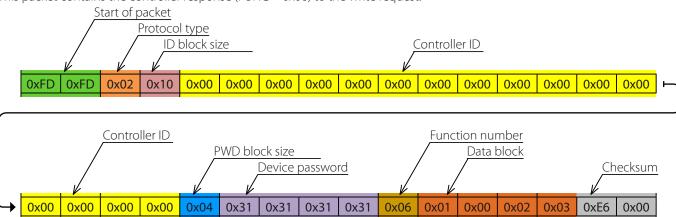

#### Request details:

Checksum: 0x00DE.

## Sending "Controller -> Smart Home" packet

This packet contains the controller response (FUNC = 0x06) to the write request.

#### Controller response details:

- Parameter 0x0001 equals 0x00.
- Parameter 0x0002 equals 0x03.
- Checksum: 0x00E6.

# **PARAMETER TABLE**

**Functions:** 

R - 0x01 INC - 0x04 RW - 0x03

**W** – 0x02 **DEC** – 0x05

Parameter number [Dec./Hex.]	Functions	Description	Possible values	Size [bytes]
1/0x0001	R/W/RW	Unit On/Off	0 — Off 1 — On 2 – Invert	1
2/0x0002	R/W/RW/INC/DEC	Speed number	1 – Speed 1 2 – Speed 2 3 – Speed 3 255 – manual speed setting mode (see parameter 68)	1
6/0x0006	R	Boost mode status	0 – Off 1 – On	1
7/0x0007	R/W/RW/INC/DEC	"Timer" mode (see parameters 770 and 771)	0 – Off 1 – Night mode 2 – "Party" mode	1
11/0x000B	R	Current countdown of the "Timer" mode	Byte 1 – seconds (059) Byte 2 – minutes (059) Byte 3 – hours (023)	3
15/0x000F	R/W/RW	Humidity sensor activation	0 – Off 1 – On 2 – Invert	1
20/0x0014	R/W/RW	Relay sensor activation	0 – Off 1 – On 2 – Invert	1
22/0x0016	R/W/RW	0–10 V* sensor activation	0 – Off 1 – On 2 – Invert	1
25/0x0019	R/W/RW/INC/DEC	Humidity threshold setpoint	4080 RH%	1
36/0x0024	R	Current RTC battery voltage	05000 mV	2
37/0x0025	R	Current humidity	0100 RH%	1
45/0x002D	R	Current 0–10 V* sensor signal value	0100 %	1
50/0x0032	R	Current relay sensor state	0 – Off 1 – On	1
68/0x0044	R/W/RW/INC/DEC	Speed of the fans in the manual speed setting mode	0255	1
74/0x004A	R	Fan 1 speed	05000 rpm	2
75/0x004B	R	Fan 2 speed	05000 rpm	2
100/0x0064	R	Timer countdown to filter replacement	Byte 1 – minutes (059) Byte 2 – hours (023) Byte 3 – days (0181)	3
101/0x0065	W	Reset timer countdown to filter replacement	Any byte	1
102/0x0066	R/W/RW/INC/DEC	Setpoint of the Boost mode deactivation delay	060 minutes	1

Parameter number [Dec./Hex.]	Functions	Description	Possible values	Size [bytes]
111/0x006F	R/W/RW	RTC time	Byte 1 – RTC seconds (059) Byte 2 – RTC minutes (059) Byte 3 – RTC hours (023)	3
112/0x0070	R/W/RW	RTC calendar	Byte 1 – RTC number (131) Byte 2 – RTC day of the week (17) Byte 3 – RTC month (112) Byte 4 – RTC year (099)	4
114/0x0072	R/W/RW	"Weekly schedule" mode	0 — Off 1 — On 2 – Invert	1
119/0x0077	R/W/RW	In the read request you should use special command 0xFE and specify the size of the 0x02 parameter value required for selecting the necessary day of the week and time period number.  The write request and the controller response use all the 6 bytes.  The first time period always starts at 00:00 while the start of each following period begins at the end of the previous one.  The final time period always ends at 24:00	Byte 1 – day of the week:  0 – all days (write only)  1 – Monday  2 – Tuesday  3 – Wednesday  4 – Thursday  5 – Friday  6 – Saturday  7 – Sunday  8 – MonFri (write only)  9 – SatSun (write only)  Byte 2 – period number:  14  Byte 3 – speed number:  0 – standby  13  Byte 4 – reserved: any byte  Byte 5 – minutes to end of period:  059  Byte 6 – hours to end of period:  023	6
124/0x007C	R	Device search on the local network,	Text ("09","AF")	16
125/0x007D	R/W/RW	Device password	Text ("09", "az", "AZ")	0-8
126/0x007E	R	Machine hours	Byte 1 – minutes (059) Byte 2 – hours (023) Byte 3 and Byte 4 – days (065535)	4
128/0x0080	W	Reset alarms	Any byte	1
131/0x0083	R	Alarm/warning indicator	0 – No 1 – alarm (highest priority) 2 – warning	1
133/0x0085	R/W/RW	Cloud server operation permission	0 – Off 1 – On 2 – Invert	1
134/0x0086	R	Controller base firmware version and date	Byte 1 – firmware version (major) Byte 2 – firmware version (minor) Byte 3 – day Byte 4 – month Byte 5 and Byte 6 – year	6
135/0x0087	W	Restore factory settings	Any byte	1

Parameter number [Dec./Hex.]	Functions	Description	Possible values	Size [bytes]
136/0x0088	R	Filter replacement indicator	0 – filter replacement not required 1 – replace filter	1
148/0x0094	R/W/RW/INC/DEC	Wi-Fi operation mode	1 – Client 2 – Access Point	1
149/0x0095	R/W/RW	Wi-Fi name in Client mode	Text	132
150/0x0096	R/W/RW	Wi-Fi password	Text	864
153/0x0099	R/W/RW	Wi-Fi data encryption type	48 – OPEN 50 – WPA_PSK 51 – WPA2_PSK 52 – WPA_WPA2_PSK	1
154/0x009A	R/W/RW/INC/DEC	Wi-Fi frequency channel	113	1
155/0x009B	R/W/RW	Wi-Fi module DHCP	0 – STATIC 1 – DHCP 2 – Invert	1
156/0x009C	R/W/RW	IP address assigned to Wi-Fi module	<b>Byte 1</b> – 0255, <b>Byte 2</b> – 0255, <b>Byte 3</b> – 0255, <b>Byte 4</b> – 0255	4
157/0x009D	R/W/RW	Wi-Fi module subnet mask	<b>Byte 1</b> – 0255, <b>Byte 2</b> – 0255, <b>Byte 3</b> – 0255, <b>Byte 4</b> – 0255	4
158/0x009E	R/W/RW	Wi-Fi module main gateway	<b>Byte 1</b> – 0255, <b>Byte 2</b> – 0255, <b>Byte 3</b> – 0255, <b>Byte 4</b> – 0255	4
160/0x00A0	W	Apply new Wi-Fi parameters and quit Setup Mode	Any byte	1
162/0x00A2	W	Discard new Wi-Fi parameters and quit Setup Mode	Any byte	1
163/0x00A3	R	Current Wi-Fi module IP address	<b>Byte 1</b> – 0255, <b>Byte 2</b> – 0255, <b>Byte 3</b> – 0255, <b>Byte 4</b> – 0255	4
183/0x00B7	R/W/RW/INC/DEC	Ventilator operation mode	0 – ventilation 1 – heat recovery 2 – supply	1
184/0x00B8	R/W/RW/INC/DEC	0–10 V* sensor threshold setpoint	5100 %	1
185/0x00B9	R	Unit type	3: Vento Expert A50-1 W V.2 Vento Expert A85-1 W V.2 Vento Expert A100-1 W V.2 4: Vento Expert Duo A30-1 W V.2 5: Vento Expert A30 W V.2	2
